

#### Week 5 Exercises on JSON:

- 1) Develop an application using HTML, CSS and Java Script such that access to JSON data from URL parameters will display the data based on the search keywords mentioned in the textbox. (Assume appropriate members and data for the design and development of the required application).
- 2) Write JS code that reads XML file or JSON file and print the details as tabular data. (Assume appropriate members and data for the design and development of the required application).
